SUPERIOR SPECIALTY CONTRACTING SERVICES

INCORP

a ConTeras Company

Incorp delivers execution-driven industrial services across the United States with skilled crews, disciplined planning, and the multi-craft capability to keep complex projects on schedule. Our teams support capital projects, maintenance programs, and planned outages in a wide range of industrial environments, delivering coordinated services that keep work moving safely.

INSULATION SYSTEMS

Industrial Insulation – Field-installed insulation systems supporting thermal heat conservation control, for piping & equipment, personal protection, and to ensure stable operating conditions across operating facilities. Installed on piping, vessels, tanks, and process equipment during construction, maintenance, and outage work.

Metal Siding Pipe & Equipment Insulation Jacketing – Protective metal jacketing/lagging installed over insulation to protect assets and maintain system performance. Applied on boilers, piping, vessels, and equipment using aluminum, stainless steel, or other specified jacketing materials.

ACCESS & PROJECT SUPPORT

Industrial Scaffolding – Scaffold systems erected to provide safe, reliable access for industrial maintenance, construction, and shutdown work. Systems are inspected and maintained in accordance with OSHA requirements and site safety programs.

Shutdown & Turnaround Support – Field crews supporting planned outages where workforce scale and schedule discipline are critical. Teams mobilize to support insulation, coatings, scaffolding, and other multi-craft scopes during turnaround events.

SURFACE & ENVIRONMENTAL SERVICES

Incorp provides industrial coatings, cementitious fireproofing, lead and asbestos abatement, and other industrial remediation services. Each scope is performed with strict safety protocols, environmental controls, and regulatory compliance to protect facility personnel and equipment while maintaining schedule continuity.

SIDING, INSULATED METAL PANELS, AND ROOFING

Metal Siding – Exterior metal cladding installed on industrial buildings and structures for weather protection and a durable, finished appearance. Installation follows project specifications and is coordinated with adjacent building components.

Insulated Metal Panels – Wall and roof panels that combine metal facings with an insulated core, providing thermal performance, weather protection, and finished surfaces in a single building-envelope assembly.

Roofing – Roofing systems installed to protect facilities from weather and support long-term roof performance. Work follows project specifications and is coordinated with adjoining siding, panels, and other building-envelope components.

WHY INCORP?

Decades of industrial experience backed by a proven track record of executing complex industrial work for the most demanding facilities in the country.

Workforce built to scale — nationwide Hundreds of full-time employees backed by thousands of trained craft professionals, ready to mobilize anywhere in the U.S.

Multi-craft capability, single contractor accountability Open-shop crews trained across key industrial trades — fewer handoffs, tighter schedules, cleaner execution.

Licensed where you operate Safety-first on every jobsite. Industry-leading safety performance with rigorous training at every level, from field crews to management.
